

Research Practicum

Week Three

Miriam Golden

26 January 2021

1. Observational PAP deposited in course materials
2. Examine GitHub Classroom repositories
 - Potts/Canelejo/Gonzalez homework repo has too many layers
 - Formichev/Kittel/Wang homework directory is too complex with too many directories
 - Borg/Bramucci/Garside homework repo has weird directory structure and no .md versions of files
 - Chazottes/Sola/Vecgaile did not divide the HW into three separate docs
3. Discussion of RMarkdown for homework submissions -Submit in .md format in future
4. Proposal for pilot funding. Pilot funding can mean different things. As a graduate student, pilot funding probably means €5,000 or less. To be competitive, you probably just need a good idea, a lot of curiosity, and the very strong support of a well-known and credible advisor. Review J-PAL GI instructions for travel grants; IGC project proposal form.
5. Discussion of directory structures for project; pipeline
6. Partnerships in the field
