

# Practicum in Reproducible Research Methods

## Homework Four

Second Term 2020–21

Professor Miriam Golden

Assignment due: March 23 by 15:00

---

For this assignment, each research team will finalize the data analysis, write-up, and accompanying materials they have been working on.

For this assignment, you will submit a professionally-formatted paper. It need be of no particular length, and I encourage brevity. If your basic paper is under 10 pages, that is great.

In addition to writing your final paper, you must also prepare your replication code and prepare your codebook. You may also optionally write a brief reporting the importance of your findings for policy makers. The policy brief will provide extra credit. However, you should write it only if you have already prepared the best paper, code, and codebook possible.

Due by 15:00 March 23:

1. Final research paper (in .md)
2. Replication code (in .R)
3. Codebook (in .md or .pdf)
4. Optional policy brief (in .md or .pdf)
